A1 Freeflow Drain Relining

The choice in pipe rehabilitation & anti-corrosion

A1 Freeflow Drain Relining allows our specialists to replace underground pipe without disturbing any surface materials such as:

- ▣ Driveways
- ▣ Landscaping
- ▣ Porches
- ▣ Floors
- ▣ Roadways
- ▣ Parking lots
- ▣ Electrical, gas & water lines

www.a1adt.com.au

This means you save time and money because there is no surface restoration needed. Most installations can be done through an average 100mm cleanout.

Root Intrusion

Spot Repair is Installed

The roots are removed and a repair is placed over the damaged area. This sleeve is cured and the bladder removed, leaving a new pipe inside the old one with very minimum diameter loss.

Small Diameter Pipe

No Dig Pipe Replacement

A1 Freeflow Drain Relining's licenced system gives the home owner a cost effective alternative to traditional dig methods of pipe replacement, but still offers the structural strength of a new pipe. These techniques keep digging to a minimum, which will save you money.

Trenchless Lateral Repair

All of A1 Freeflow Drain Relining's lateral rehabilitation techniques can be launched through cleanouts. Our licenced system can also start and stop anywhere in the line, which again can save money and our Nuflex can handle BENDS.

Mainline Spot Repair

A1 Freeflow Drain Relining can line pipe from 40mm up to 300mm. We can line complete sewer systems, and most lining and reinstatement can be done without digging. A1 Freeflow Drain Relining's licenced system can be launched through cleanouts and allows us to fix problems of any length anywhere in the line.

Spot Repair

A1 Freeflow Drain Relining's rehab kit allows our technicians to repair damaged underground pipe without digging. We simply attach our repair bladder to a patented harness which is fitted with a mini camera. Then we wet out our repair patch and position the bladder over the damaged pipe, inflate and cure. After 40 minutes, the repair is cured and the bladder is launched and retrieved via the cleanout.

Change of Diametre Pipelining

A1 Freeflow Drain Relining expandable materials give our technicians the capability to change diametre sizes anywhere in the line. Our change of diametre tube gives you a full strength liner in both sizes without compromising the integrity of the pipe.
